Institute of Agricultural and Veterinary Sciences	16	31	04	36	20	67
Total	337	955	361	1249	698	2204

Bachelor's Program (Licence):

The statistics indicate that the graduation rate for female students in the Bachelor's program has been steadily increasing. In the past few years, the number of female students graduating has approached or even exceeded the number of male students in certain fields, including in technical and scientific faculties. Female students have shown a strong academic performance, with a significant portion completing their studies on time and achieving high grades.

Master's Program:

Similarly, in the Master's program, the graduation rates for female students have also been rising. Female students have shown a high level of commitment, and many are choosing advanced study programs in various disciplines. The number of female graduates in Master's programs has been comparable to, or in some cases higher than, their male counterparts.

Efforts to Support Female Students:

The university has implemented various initiatives aimed at closing the gender gap and supporting female students. These initiatives include:

- Academic support programs
- Training workshops
- Awareness campaigns emphasizing the importance of completing higher education

These initiatives are part of the university's overall strategy to promote gender equality and ensure that female students have equal opportunities for educational success.

Conclusion:

The continuous monitoring of graduation rates at the University of Souk Ahras shows a promising trend in the academic success of female students. With ongoing support and initiatives, the university aims to further enhance opportunities for women in higher education and contribute to achieving gender equality in the academic sphere.
