

About the Author

Dr. Gherissi Djalel Eddine, Associate Professor and Veterinarian, specializes in Animal Production and Reproductive Biotechnology. His research focuses on improving health management and sustainable production in dairy cattle and camels, particularly in arid regions. Through workshops and research, he aims to enhance livestock systems and genetics to support agricultural communities, boost food security, and reduce poverty.

Book summary

"Fundamentals of Production and Performance Control of Dairy Cattle" is a comprehensive guide for veterinary and agronomy students, as well as industry professionals. It covers key topics such as dairy breed evolution, herd management, preventive medicine, nutrition, and genetics. The book also addresses milk production techniques and farm economics, offering essential insights to improve dairy cattle performance and support global food security.
